

# MOUNT FRANKLIN 350ML, 400ML, 500ML AND 600ML BOTTLES ARE PROUDLY MADE FROM 100% RECYCLED PLASTIC. THE CAPS & LABELS ARE RECYCLABLE

## THE RECYCLED PLASTIC IS:

Non-toxic, BPA free

**100% recyclable.**

Produced from

**recycled packages,** which go through a process to remove impurities, and are cleaned and sterilised then turned into food-grade **recycled plastic.** This plastic resin has been used previously, and can be **recycled for future use so it has more than one life.**

**Low energy intensity**

to manufacture compared to glass and aluminium.

Lightweight compared to other packaging (up to **85% lighter** than glass\*). This helps reduce transportation requirements and

**lower CO<sub>2</sub> emissions.**

\*For example an average 450ml Sparkling PET bottle is 19.8grams while an average 330ml Sparkling glass is 210grams.

## MOUNT FRANKLIN IS LOCALLY SOURCED AND BOTTLED:

Mount Franklin water is

**sustainably sourced**

in Australia from a range of specially selected Australian springs to maintain good stewardship of each source. ✓

Mount Franklin water is **bottled in Australia** and transported directly to Australian customers. This helps ensure a

**lower carbon footprint**

than imported bottled water.

**Blowfill technology**

is used locally to make **Mount Franklin's recycled plastic bottles.** This reduces the amount of resin required per bottle and reduces truck movements (due to the smaller amount of packaging to transport). Fully blown empty bottles are not transported.

Secondary packaging including labels, shrink wrap and board made of materials other than **recycled plastic** (such as for multi-packs) are all

**light-weighted to the highest standard**

achievable within Coca-Cola Amatil's current manufacturing process.

Aligning with **The Coca-Cola Company's global vision of**

**a 'World Without Waste'**

sharing the understanding that every package has value and life beyond its initial use and should be collected and recycled into another package or other beneficial use.

## OUR APPROACH TO PACKAGING:

Coca-Cola Amatil has a commitment to achieve

**packaging neutrality**

by 2030 - so we aim to help recover the equivalent of a bottle or can for each one we sell.

**Minimising packaging** use through better design, light-weighting where possible and replacing virgin materials with **recycled content** where possible.

Delivering a **25% carbon reduction**

on the 'Drink In Your Hand' by 2020, this is the end-to-end value chain including manufacturing processes, packaging formats, delivery fleet, refrigeration equipment and ingredient sourcing.

**Supporting Australia's 2025 National Packaging Targets.**
