

# Complete Energy Profiling

Many organisations would undertake a review of their energy costs with the aim of securing a better deal.

Some organisations achieve this, but many don't due to hidden brokerage fees and costs or 'value added service fees'. While cost savings may be your primary driver in the first instance, ReThink offer a full comprehensive approach to compiling your complete energy profile. Our team are focused on providing an end-to-end approach that ensures you receive commercial acumen relevant to sustainability.

Rethink Sustainability's three step process allows you to immediately see cost savings. There are minimal brokerage fees and no hidden costs, while you will learn how your complete energy profile can be enhanced and improved. This can lead to even greater cost savings, efficiencies and optimisation.

## ENERGY COST SAVINGS

- Log onto our energy assessment portal and upload your current energy bills
- Receive most competitive new energy contract options with no hidden costs
- Re-budget your operational expenses with increased savings
- Redirect 20% of your annual cost savings into advisory services, equipment or infrastructure for further benefits and savings

## MAKE A PLAN

- Develop an appropriate roadmap that supports improved governance and risk related to sustainability
- Formally engage with our expert team with tailored expertise for your sector
- Receive access to our wider partner network for cutting edge practices and concepts that align with improving efficiencies in your business model

## ENERGY NETWORKING

- Realise your energy profile potential with implementation of new technologies and cost savings
- Drive a sustainable company agenda through new developments
- Align your business with a Virtual Energy Network to maximise your energy potential
